Subject: Pier 36B sampling update

Hello Jason,

I had a discussion about the shallow sediments at the 7 locations along Pier 36B with Ravi and Erika and I want to clarify/verify a few items. Can you please respond to this email and include Ravi and Erika in the response?

1. There are 3 locations (Berth 12, Pier 17 and Pier 19) that have material for a composite core from 0 -2 feet. (based on our phone call just now it sounds like this is not correct for berth 12)
2. We have attempted 3 distinct locations at pier 20, berth 7 and berth 10 locations, within a 25 foot radius of the original attempt per the QAPP
3. Did we retain the core from the non-continuous 60 percent recovery from pier 20 location?
4. Please confirm that all sample intervals are properly preserved/stored for potential future analysis. It seems very likely this will be needed based on the observed sheen.

Please feel free to correct any information here that is not correct or provide clarifications.

Thank You,
James Hall
